What we do: Ensure that quality drugs are available through signal detection, data analysis, quality status checking, and active stakeholder engagement. Coordinated analysis, informatics and research efforts to enable for programmatic improvements, efficiency, and data integration relative to a comprehensive monitoring program that can support other Office of Pharmaceutical Quality (OPQ) data intelligence needs. Conducting an analytical and potentially predictor program for assessment and reporting on the situation From the industry regulated at the site and product level using informative, innovative, and impacting data sources. Develop innovative approaches to the surveillance paradigm that complement established inspection programs, enhance both monitoring coverage, international cooperation, and industry engagement. Manage signals and risks related to the quality of drug sites and products to inform future regulatory activities, resource allocation, deficiencies, executive decisions, program evaluation, and communications with foreign stakeholders (as such, Congress, industry, and people). Support for the work of the Food and Drug Administration (FDA) is addressed towards international regulatory coordination including regulatory FDA capability assessment and quality areas during regulatory inspections. Work with FDA business partners to recommend and develop regulations, guidance, and policies that improve regulatory reporting, reduce risks, and address recurring or acute production quality issues. Cooperation in the development of drug program training, including the creation and provision of materials and standards for employees who conduct quality monitoring inspections. Office Organization: These organizations report to the Office of Quality Monitoring: Quality Intelligence Division I Quality Intelligence Division II Leadership Office: Director: Dr Lucinda (Cindy) BuhseDeputy Director: Dr. Jennifer Maguire Resources for You: Back up you start your company and you're really nervous and excited all at once. And you start hiring and growing. Even more exciting! Next is office space of course, but do you really need it? Are you sure you want to do this I mean, of course, if you're in a service business or a store it goes without saying, you need it. But if you're not, there are a million reasons to reconsider the office space scenario. Don't do this just because it looks like any other! But to succeed in a 'distributed work environment' you need the right kind of people to work in your company. People who value things above normal days to day camaraderie and workplace banter are really folks who work well in this scenario. In general, the younger workforce tends to like the office environment better. Nicholas Bloom, co-founder of Chinese travel website Ctrip, found out for himself when he tested the image on half his staff for nine months. When asked who likes the option of working from home for an HBR interview he described people who worked well from home as people who have established social life – older workers, married workers, parents. We found that younger workers whose social lives are more connected to the office tend to not want to work as much from home. You and your team are familiar in the environment, your home! Some say they work best at home That brings an office. Even when you have a laundry to do, the dishes are stacked, you need to rest and do some of it. One thing we found is that setting up an office in the house doesn't have to take the whole room, but that's where it ends, and in Dashro, we realized that the kind of person who works well wants to spend more time at home, take their kids to school, and do what they have to do that would find it hard if they went to an office for hours at the end. There have never been any time before when there are so many excellent tools available to work and much more urgent tools that your email inbox, which still works wonders. People tend to work harder and put more hours on when they work from home. There is less time to prepare people for work (PJ up to 11!) and other commute times. The average commute time for a New Yorker is 40 minutes and the average for Detroit is 20 minutes, according to a report by Michael Sivak at the University of Michigan's Transportation Research Institute, an organization that studied transportation safety and sustainability. So if you have 5 employees who commute 1 hour each way you instantly gain 10 hours of manpower every day! Now that's powerful. Office space can be a real tax on your bank account, especially if you are in a larger city. If you need to team together WeWork and collaborate office spaces like that it's a great way to get everyone together for once a week/month gathering. As long as your team doesn't care about working the clocks you want them to, then you're recently opening up a whole new world when it comes to hiring the right people. Gone are the days of having to compete with their larger competition that cool office down the street. You can find some amazing people who are not cool in the big city and appreciate for what you offer. So think twice about raising a ton of money for an office space, especially if you don't need it. The last one? You don't have to cut your work day for those annoying fire drills! In this section: The drugs we are: The Pharmaceutical Quality Policy Office (OPPO) is responsible for the development and clear communication of science and policies and risk-based standards related to the quality of the pharmaceutical product, including the review and inspection of the request. What we do: Develop, implement, and update science and risk-based policies, relating to the evaluation of pharmaceutical components and pharmaceutical products (including combined products containing drugs) for human use. Pharmaceutical quality policies include policies governing standards and evaluations in the chemistry, manufacturing and control of applications for marketing approval and related submissions, and current good production practices. The FDA's findings, such as deficiencies and citations, assess inspections to comply with the regulations, policies and standards established, leads and Development of regulations, guidance documents, standards, compliance programs, and manual policies and procedures (MAPPS) with various business partners (e.g. pharmaceutical quality office (OPQ) sub-offices, compliance office, other drug evaluation and research offices (CDER) and the Office of Regulatory Affairs) that address drug quality assessments of program reviews through market availability for all human medicines (human medicines including brand drugs, generic drugs, biotechnology drugs, prescription drugs, over-the-counter products anti). Ensures that assessments are based on a full understanding of the product, process, food form, and clinically relevant risk factors, and regulatory policies and standards include profit risk considerations. The executive leadership of the Pharmaceutical Quality Council provides CDER. Strategic plans develop product quality and initiate policy projects with input from council members to address specific unmet needs. Work with the FDA Council on Pharmaceutical Quality to address the emerging drug product quality process and establish strategic policy objectives in partnership with OPQ. Coordinates the development of product quality to and external communications to and from all stakeholders (Government Accountability Office, Congress, General, Industry, and other domestic and foreign government agencies) to ensure consistent interpretation and use of CDER's pharmaceutical quality policies and programs. Working with OPQ Labs and helps prioritize research to support policy development and regulatory decision-making. Ensures that research and scientific knowledge are identified, developed, if necessary, and used appropriately in policy development. Coordinate OPQ's interaction with national (as such, the Consumer Product Safety Commission, the Ministry of Defense, the National Institute of Standards and Technology) and domestic regulatory authorities (as such, the International Coordination Council, the Pharmaceutical Inspection Cooperation Plan, the World Health Organization) to ensure the coordination or convergence of policies and procedures for efficient and effective regulation of pharmaceutical quality. It is leading OPQ's efforts to identify and develop strategic partnerships and information-sharing arrangements with other government, foreign and domestic agencies, relating to pharmaceutical quality. Office Organization: The Office of Policy for Pharmaceutical Quality includes the following organizations: Editorial & Project Management Staff Compendial Operations & Standards Staff Division of Regulations, Guidance, & Standards Division of Internal Policies & Programs Office Leadership: Director: Ashley BoamDeputy Director: Brian Hasselbalch Resources For You: Back to Top Top
